Hi all,

I do not have much information about programming or algorithms (actually IDL is my first programming language), so my question may rather be simple but i could not figure it out , so here we go:

I have lots of data such as:

```
7.200000 23.789000 18.014000 23.788000 10.895200
9.300000 23.786000 18.025000 23.784000 10.904400
14.700000 23.284000 18.156000 23.281000 11.138100
19.800000 16.863000 18.145000 16.860000 12.654200
24.600000 9.811000 18.199000 9.809000 13.895200
29.700000 9.041000 18.234000 9.039000 14.020000
34.700000 8.627000 18.258000 8.624000 14.088300
39.700000 8.575000 18.378000 8.572000 14.188100
44.800000 8.063000 18.638000 8.060000 14.449600
49.700000 7.925000 19.161000 7.921000 14.873900
54.700000 7.987000 19.425000 7.983000 15.073500
59.900000 8.037000 19.755000 8.032000 15.325900
64.600000 8.079000 19.985000 8.074000 15.501000
69.500000 8.119000 20.130000 8.114000 15.609800

699.500000	8.907000	22.190000	8.842000	17.129200
749.000000	8.914000	22.214000	8.845000	17.147600
799.200000	8.922000	22.233000	8.848000	17.162100
849.100000	8.930000	22.248000	8.851000	17.173400
899.400000	8.940000	22.263000	8.855000	17.184400
949.000000	8.948000	22.274000	8.858000	17.192600
999.100000	8.957000	22.284000	8.862000	17.199900
1048.900000	8.965000	22.291000	8.865000	17.205000
1099.200000	8.973000	22.297000	8.868000	17.209400
1149.200000	8.982000	22.302000	8.872000	17.212800
1199.400000	8.989000	22.306000	8.873000	17.215700
1249.400000	8.997000	22.309000	8.876000	17.217700
1299.200000	9.005000	22.312000	8.879000	17.219700
1349.100000	9.012000	22.314000	8.880000	17.221000
1399.200000	9.020000	22.316000	8.883000	17.222200
1449.000000	9.027000	22.318000	8.884000	17.223600
1499.200000	9.034000	22.319000	8.886000	17.224200
1542.300000	9.040000	22.320000	8.887000	17.224800
1549.700000	9.041000	22.320000	8.887000	17.224800

The 5th column of this data is my area of interest. I want to take the data(with all 5 columns of corresponding to the line) where the difference between consecutive lines is smaller than 0.3 . For example for this data, i have

10.895200
 10.904400
 11.138100
 12.654200

.....

So I want to take the lines from the first line up to 12.654200(since the difference is more than 0.3)

What i have done so far is :

```
pro a
;window, 0, retain=2

file_array=file_search('/home/...../0587', '0587.*.txt',
count=num_file)
for i=0,num_file-1 do begin
file=file_array(i)
```

```
nrows = File_Lines(file)
```

```
data=fltarr(5,nrows)
```

```
OpenR, lun, file, /GET_LUN
ReadF, lun, data
Free_Lun, lun
```

```
p=data(0,*)
t=data(1,*)
s=data(2,*)
q=data(3,*)
d=data(4,*)
close,lun
free_lun, lun
```

```
1st try
;for k=1,nrows-2 do begin k=k+1
;ml=where((d(k+1)-d(k)) gt 0.3,ss)
;endfor
```

```
2nd try
;k=1
;repeat begin ml=(d(k)-d(k-1))
;k=k+1
;endrep until (ml gt 0.3)
;print,d(0:k)
```

```
free_lun,lun
endfor
```

```
close,/All
end
```

Neither of them work ! I used an if-then-else statement too but could not solve my problem.
I would really appreciate any help. Thanks in advance,
ANIL
