Subject: html link to files

Hi every one,

I want to make a html link of files (say, gif) with their remarks. The number of files are large and each file have its own characteristics (stored in a 'propert.dat' file). Therefore, I want to write an program that create link to files (stored in a directory, say, G:\data\gif\) and put their properties (from 'propert.dat') in different columns of corresponding rows, viz

```
=================================
SN  files   prop_a      prop_b          prop_l
=================================
1   file_1   text_1a    text_1b  ...    text_1l
2   file_2   text_2a    text_2b  ...    text_2l
3   file_3   text_3a    text_3b  ...    text_3l
........
.......

n   file_n   text_3n    text_3n  ...    text_nl
 ==============================
```

Thanks
