
Subject: use ENVI+IDL together

Hi everyone,

I have written a code in IDL which interacts with ENVI. The code works fine on a Windows system but I need to run it on an Linux system.

Is there a possibility on Linux to start ENVI+IDL together like in the Windows system with the "envi_idl.exe" file? Until now, with the Linux system, I can only start ENVI and IDL seperately which means that they can't interact together.

I hope that someone can quickly answer to this question:

Cheers,

Nicolas
