There used to be something like ION Java and ION Script. Here are some examples:

<http://ion.researchsystems.com/IONScript/wavelet/>

<http://coco.atmos.washington.edu/cgi-bin/ion-p?page=index.io> n

<http://helix.nih.gov/Applications/IONJava/>

I never used it myself and I think it's not included in IDL anymore. I don't know why, maybe they don't want people to use IDL.

Here is an application that doesn't use ION

<http://soc.boulder.swri.edu/nhgv/>

I guess the main message is: IDL is not going to help you making web applications, so you have to make your own JAVA/PHP/... front-end as you suggested. (Not sure whether the IDL-JAVA bridge can help you...)
