Use scope_varfetch:

```
IDL> str = ['a','b','c','d']
IDL> for i=0,3 do (scope_varfetch(str[i],/ENTER,LEVEL=1)) = i
IDL> print, b
      1
IDL> print, a
      0
IDL> print, d
      3
```

Setting LEVEL to 1 creates the new variables in the main level, not specifying LEVEL or setting it to 0 will create them in the current routine.
