I have an array of string and want to use its elements as variable names in a function.

How can I do?

Is there any simple code to replace the ones below?

For example:

```
STR = ['a', 'b', 'c', 'd', 'e']
```

```
for i=0, 4 do begin
```

```
  case i of
```

```
    0: data=a
```

```
    1: data=b
```

```
    2: data=c
```

```
    3: data=d
```

```
    4: data=e
```

```
  endcase
```

```
  .....
```

```
  .....
```

```
  .....
```

```
endfor
```
