Subject: min_curve_surf error? Posted by kspencer on Fri, 09 Aug 1996 07:00:00 GMT View Forum Message <> Reply to Message

I've been looking at "min_curve_surf" in the IDL /lib directory. On lines 264-265, there is the following:

; For min_curve_surf, divide c(3:*) by 2 cause we use d^2 rather than d. if keyword_set(tps) eq 0 then c(3) = c(3.*)/2.0 $\wedge \wedge \wedge \wedge$

It seems to me that c(3) should be c(3:*), according to the comment. Has anybody noticed this?

Kevin
