Hi Helen,

I suggest you to use of the MODIS REPROJECTION SWATH TOOL
(https://lpdaac.usgs.gov/lpdaac/tools/modis_reprojection_tool_swath)

It allows georeferencing, reprojection and resizing of MODIS L1B images providing both HDF and TIFF output.
Moreover, it has a command line interface that allows to process sequentially a large number of images by using a simple batch file, or by calling the tool with a SPAWN command from a IDL process cycling on input file names.

Hope this helps,

Lorenzo
