
Subject: how to animate/loop plots (not images)

I have a series of simple 2D line plots that I would like to animate. I'm currently writing the plots to a postscript file, and then using some external applications to convert them to (unfortunately large) tiff files and then loop them. Is there a simpler way to do this in IDL? The manuals talk about how to loop a series of images stored in a single array, but this isn't what I'm dealing with.

Thanks for any insight on this problem.
