Hi,

is there a way to know if a device support the procedure TV ?

I tried to use !d.flags (bit 3: Device can display image) but it does not work, e.g.

```
> set_plot,'x'  
  > print, !d.flags and 8  
8  
> set_plot,'ps'  
> print, !d.flags and 8  
0
```

Following this, the postscript device is not able to display an image...

Thanks in advance

Michel Kruglanski
