Hi Rich,

If you are able to, I would try and get hold of the "Learning IDL:
An Interactive Training Course" Manual from RSI as it's an easier
way to learn IDL than the manuals that come with the software.
(There's a second manual about widgets if you intend to write
widget applications).

Meanwhile, the "slicer" routine may be what you need. The
online help (type ?) should explain enough to get you started
with it.

    Good luck

        Tim

P.S. Couldn't email you at the address in your header
