Hi!

The question is a little bit out of topic, but I don't know any other place to ask...

For my research I need daily averages of 3 weather variables : pressure, temperature, wind from several different stations around the globe. Does anybody know of any downloadable data? I don't really care about how old they're - I need about 3-4 years of continuous data.

ANY hint/advice/URL will be highly appreciated.

Again, sorry for the off-topic

Anton
