Subject: Re: does anyone NOT have to force quit SWT/IDLHelp on Mac OS X?
Posted by Robbie on Fri, 16 Oct 2009 07:34:49 GMT

Hi Doug,

It would be great if the standalone IDLHelp worked more like it used
to in IDL 6.4. I often find that I accidently close the Safari window,
so I have the IDLHelp application running, but no instance of Safari.
Would it be plausible to have a menu option to open a new safari
window pointing to the help webpage of the currently running help
server?
