
Subject: does anyone NOT have to force quit SWT/IDLHelp on Mac OS X?

Hi All,

Subject line says it all - I think this is probably an Eclipse-related problem rather than IDL per se, but it's annoying nonetheless. I'm not running the idlde, I've observed this in all versions of IDL 7.X and Mac OS X 10.5.x to 10.6.x.

There was some discussion of this on the list back in June (http://groups.google.com.au/group/comp.lang.idl-pvwave/browse_thread/thread/ef8263aa1f94fa9c/dfcfaa170ee92e5c?hl=en&lnk=gst&q=SWT#dfcfaa170ee92e5c), but no resolution was reached.

Does anyone have any suggestions?

Will.
