Yes, thank you, thats it.

Nevertheless, it is not accurate enough for what i want... The lines
it draws connect "extreme" points and then do not pass by all
"important" points.

Clearly, the problem is as follows:

```
      T
      a
      aa
      aaa
    Zaaaaa
Paaaaaaaaaaaaaaaaaaaaaaaaaaaaa
```

with convex_hull.pro, a line connects directly the data points T to P
whereas i would like to connect T to Z and then Z to P.

Can it be done by modifying convex_hull.pro?

cheers
