I need some help on an image I'm working on.

I've got many regions that I've distinguished via LABEL_REGION and looked at the population of the regions using HISTOGRAM. Most of these regions have a population of less than 5 or so. For these regions I have made the population zero by:

```
im_pop = where(areas lt 5, numbers)
if numbers lt 5 then area[im_pop]=0
```

After I've got the populations of my regions where I want, for the most part, I need to get all the regions, including the 0 population regions, back into pixel space for display. I cannot for the life of me figure this out.

Any help would be appreciated!
Dave
