Subject: label\_region/histogram help Posted by david.b.valdez on Tue, 03 Nov 2009 21:21:18 GMT View Forum Message <> Reply to Message

I need some help on an image I'm working on.

I've got many regions that I've distinguished via LABEL\_REGION and looked at the population of the regions using HISTOGRAM. Most of these regions have a population of less than 5 or so. For these regions I have made the population zero by:

im\_pop = where(areas It 5, numbers)
if numbers It 5 then area[im\_pop]=0

After I've got the populations of my regions where I want, for the most part, I need to get all the regions, including the 0 population regions, back into pixel space for display. I cannot for the life of me figure this out.

Any help would be appreciated! Dave
