Subject: Save a linkedlist?
Posted by Brian Larsen on Fri, 13 Nov 2009 19:54:20 GMT

Hey all,
I have some satellite data that I am mining and a linkedlist seems to
be a great way to store this. I would like to store this data to a
file, it seems like the easiest way is to just use save, listname.
The problem is that restore then doesn't seem to work. Is this an
issue where pointer objects can't be saved and restored or am I doing
something wrong (or both)?

```
IDL>  mylist = Obj_New("LINKEDLIST", 5)
IDL>  mylist->Add, 10
IDL>  mylist->Add, findgen(10)
IDL> save, 'test.idl', mylist

quit and restart idl

IDL> restore, 'test.idl'
IDL> help
% At $MAIN$
MYLIST        OBJREF    = <ObjHeapVar1(LINKEDLIST)>
IDL> print, mylist->get_item(/all, /deref)
% Attempt to call undefined method: 'LINKEDLIST::GET_ITEM'.
% Execution halted at: $MAIN$
IDL> print, mylist->get_item(1, /deref)
% Attempt to call undefined method: 'LINKEDLIST::GET_ITEM'.
```

Cheers,

Brian
