OK, you IDL gurus. How do you delete an IDL system variable
you have created with DefSysV without getting out of the IDL session?

```
IDL> DefSysV, '!TESTER', 5
IDL> DelVar, !TESTER
% DELVAR: Expression must be named variable in this context: <INT
(    5)>.
```

```
IDL> Undefine, !Tester
IDL> Help, !Tester
<Expression>  INT    =    5
```

My current thinking is that it is not possible. Any good ideas?

Cheers,

David
