Subject: Tough System Variable Question for the IDL Gurus Posted by David Fanning on Wed, 11 Nov 2009 22:05:11 GMT

OK, you IDL gurus. How do you delete an IDL system variable you have created with DefSysV without getting out of the IDL session?

```
IDL> DefSysV, '!TESTER', 5
 IDL> DelVar, !TESTER
% DELVAR: Expression must be named variable in this context: <INT
    5)>.
 IDL> Undefine, !Tester
 IDL> Help, !Tester
<Expression> INT
                            5
```

My current thinking is that it is not possible. Any good ideas?

Cheers,

David
