First of all, I suppose that for use the ASSOC function I need to store my arrays into a binary file. That's not very efficient...

After that, I tried to accede to the created files to get the desired information and I didn't succeed. Maybe I don't know how to use this function properly but I always have errors.

I don't know if I can use the ASSOC function in order to save compressed data using the PACKED keyword and then have access to the file efficiently. If it's possible and this is a good solution to keep information, please tell me how to do that.
