**Subject: Background colour in widgets**

Hi all,

How can I find out what colour is used in the
background of my widgets?  When I say background,
I mean, for example, the colour of the base
behind a widet label.

I'm sure it's set somewhere in my window manager
resource file, but can IDL work out what it is?

Thanks in advance,

Thanks also to Mark from RSI who replied with
solution to my last question.

Maurice Ringer.
