```

Try these:

```
tvlct, /get, r, g, b  
r = reverse(r)  
g = reverse(g)  
b = reverse(b)  
tvlct, r, g, b
```

You might not want to reverse all color indices in order not to change
fore- and background. You might also want to take of the color common
block...

Hope this helps,

Chris.
