Reimar,

I had to do this by hand with my laptop Ubuntu 9.04. I don't have it with me and I'm not a linux expert, but I think these steps will work. Maybe with the caveat that you have the same type of license I do.

Make sure the license file is called license.dat and is readable by all users. (ours lives in /usr/local/itt/license)

You need to edit the sys5_idl_lmgrd file for your idl installation (just the parts between these lines to have the correct paths for your system).

```
# NOTE: EDIT THESE DEFINITIONS FOR YOUR SITE  
# END OF END-USER DEFINITIONS
```

copy the sys5_idl_lmgrd file to your /etc/init.d/ directory.

If you want the license manager to run on every machine start up:
sudo chkconfig sys5_idl_lmgrd

This will create the symbolic links into the rc.[x] directories that control startup and shutdown for the license manager (which will take effect on the next reboot)

If you want to just start the manager.
sudo /etc/init.d/sys5_idl_lmgrd start

It's got a stop option too.
sudo /etc/init.d/sys5_idl_lmgrd stop

I'm sorry I'm not a proper linux expert, but I hope this pushes you to

the correct solution.

Cheers,
Matt
