Subject: passing parameters indirectly Posted by kkobayas on Tue, 03 Sep 1996 07:00:00 GMT

Hi,

I remember there is a way in IDL where one can pass parameters indirectly; that is, if procedure A calls procedure B which then calls procedure C, pass parameters from A to C without modifying the procedure call in B. Specifically I need to pass extra parameters to a function called by CURVEFIT. I looked over the manual but could not find a reference: could someone tell me how to do this?
