Subject: How to avoid BSQ?

Please excuse my ignorance, but can somebody explain me the rules when
and why Envi creates BSQ instead of BIL? In case I wanna avoid a BSQ,
do I have to write an IDL script and define there that the outcome
should be BIL? For instance, I've just done a simple addition of two
integer BIL images, why is the outcome a BSQ file? Do I have to write
a script each time I do these calculations? Thanks in advance, Eva.
