Subject: incorporating graphics into PC files
Posted by murthy_j on Tue, 12 Jan 1993 12:49:27 GMT

I am trying to incorporate IDL (v3.0.0) graphics written on my workstation
into Microsoft Word documents. Currently I can either write EPS files, which
I cannot edit on my PC, or 8-bit TIFF files (using the TIFF_WRITE library
procedure) which are big and clumsy, but which I can edit in Word. Is there
a better way to do tis? Ideally, for line drawings, I would write a single
bit TIFF file (if that exists?) and put that into Word. I could then edit it
and place arrows, labels, etc wherever and in whatever font I want.
