Subject: version control

Hi all,

I want to put an IDL project under version control so that several
people can work on it. However, I don't know how to make sure that
some workbench and project settings are the same for everyone who
"pulls" the project:

- Window > Preferences > IDL > Editor > Insert spaces for tabs,
unchecked
- Project > Properties, custom run and build commands

I looked in .project and .metadata but couldn't find anything. Any
ideas?

Wox
