I am having trouble trying too read a data file in Cray floating point binary format using pv-wave

I have no trouble reading data formats from HP, SUn etc.. using the following commands

```
x = fltarr(20,20,30)
openr,1,filename,/Xdr
readu,1,x
```

...

What is the commands to use to read in binary float data from a cray machine?

Million thanks in advance
