> a=isis_write, r_fid,filename + '_bil.cub'

Hi,

I'm not sure where ISIS_WRITE comes from (it's not an ENVI function as
far as i know), or what your actual error is, but it is unlikely it
will accept the r_fid keyword. You will probably need to use the
ENVI_GET_DATA function to put the band in an IDL variable and output
it from that. If there is a lot of data you may need to use tiling
(all in the ENVI Programmers guide).
