No.

Something really weird is happening. I can create files in IDL, and then delete them. The files I am having problems with are opened in objects. In general, these files are closed and then deleted (if required) in their CLEANUP methods. It is as if, when I get into the CLEANUP method, I can no longer access the LUN attached to the file, so these files cannot be closed properly. Once this happens, nothing I can do at the IDL command line can get the files out of this condition, and I have to exit IDL to gain access to permission to delete the files.

I'm working on it!

Cheers,

David
