Subject: iTools issues
Posted by Haje Korth on Thu, 28 Jan 2010 14:06:09 GMT

Good morning to the group,
I was recently in need for some quick 3D visualization, so I gave the
iTools a shot.I got what I wanted with a reasaonable amount of effort
but I encountered many quirky things along the way. I hope many will
go away with the new IDL 8 plotting system. However, one particular
problem was particularly annoying: When I set breakpoints or stops in
my code for debugging purposes, the iTools window would stop
refreshing and responding to my clicks. Is there a setting to prevent
this behavior?

Cheers,
Haje
