Subject: How to link one point after the other by an arrow in a graph(in PLOT)?
Posted by china_108 on Thu, 28 Jan 2010 11:31:13 GMT

I need to link different ponts together in a graph but instead of
linking them bu a line, I need to use an arrow to indicate the
sequence of the points. For example, for point 1(x=2,y=4), point 2
(x=3,y=5) and point 3(x=1,y=7), I need a line with an arrow in the
head to link point 1 and point 2 and then I need another line with an
arrow to link point 2 to point 3. I don't know how I can make such
arrow.

In case I didn't explain clearly, here is what I want. Please not that
the arrow is misplaced.

```
              ^point 2
            /           \
          /               \
   point 1/               \ >point 3
```

instead of

```
            point 2
          /           \
        /               \
  point 1/               \ point 3
```
