Thanks David,

If I may ask one follow up question on plotting:

Is it possible to choose which values are displayed on a given axis?

Let me elaborate with an example... I am doing a 'plot_io' (y logarithmic) with 'yrange=[50,3500]' and 'ystyle=1' (to override the IDL default range). IDL labels the y-axis at y=100 and y=1000. Is there a way to ask IDL to also put labels at y=50 and y=3000 without adding them by hand (xyouts)?

I appreciate the help!

Will
