....

has this been resolved yet?
I am just curious.

my wild guess. it sounds like the time to read a file increases
by several orders of magnitude (i don't have the original post handy).
Wasn't it seconds, up to 10 minutes?

That sounds like you need to wait for something to time out before you
can make another read.
Are you making a network connection each time (then filling up all possible
connections so you queue and wait for a previous network connection to time
out)?
Something along those lines? just a thought.

cheers,
bob
