Forgive me, I'm lazy this week.

However, I was checking out the ENVI 4.7 SP1 webinar earlier this week and ITTVIS introduced their new Optimized Linear Stretch image enhancement. What caught my interest was its ability to enhance features in the shade. I have issue during different parts of the year of shadows hiding ground points in my satellite imagery.

Does anyone know a location for a description of the Optimized Linear Stretch algorithm? My initial Google search is coming up empty. If not, I'll bug ITTVIS at their IDL User Group Conference later this month.
