Subject: idlwave completion does not work
Posted by Deckard++; on Tue, 02 Mar 2010 13:48:47 GMT

Hi,

I have recently discovered idlwave, and I would like to use it
efficiently. One of the advantages would be to use the completion and
the integrated help system, but I can't make it work. When idlwave is
loaded, I have the following lines in the messages:

Emacs IDLWAVE mode version 6.1_em22.
Loading system routine info in idle time...
Failed to convert XML routine info, falling back on idlw-rinfo.
Could not locate any system routine information.
Loading system routine info in idle time...done
Normalizing idlwave-system-routines in idle time...done
Loading and normalizing library catalogs in idle time...done

I seem like idlwave cannot find any routines, and then the completion
doesn't work. Can anybody help me?

Thanks a lot in advance,
