
Subject: "stack plot" function from ENVI in IDL?

hello,

i'd like to plot 20-30 histograms in one plot window and i'd like to use something that is similar to the "stack plot" option in an ENVI plot window. where the absolute y-values are no longer available. instead on the y-axis should be displayed something like "offset for clarity".

the stack- or ladder plot function is not what i'm looking for!

i found nothing about this. but i wonder because it is available in ENVI?!

thanx for your help
