Hi all,

I was wondering if anyone had any tools for converting old legacy FORTRAN code into IDL. I know that IDL can call FORTRAN programs, but I don't want to do that for most of my purposes. In the past I have just done it "by-hand" and it has not been too bad, but I was just wondering if anyone has any tools that would do some or most of the work (I would not expect it to be perfect).

Thanks,  
Mark
