Subject: Bug in System Variables v2.4

---

I just updated my Sun to version 2.4 and found that null system variables core dump.  
e.g.

```
IDL> defsysv,'!test',"
IDL> print,!test
Segmentation fault (core dumped)
```

I tried this with my 2.3.2 version with no problems.

This bug seems erratic and sometimes affects non-null string system variables also.

Any ideas for a workaround ?
