
Subject: How to add a title to a multi plot page

Hi

I am making multiple plots on a page using !P.multi

I want to have a title at the top of the page. How do I do this? If I do it after setting !P.multi I get a title for a particular plot. I tried adding an extra row and using xyouts but it got ugly and it won't give me a title that spans all columns.

TIA

Mathew
