Subject: How to add a title to a multi plot page

Hi
I am making multiple plots on a page using !P.multi

I want to have a title at the top of the page. How do I do this? If I
do it after setting !P.multi I get a title for a particular plot. I
tried adding an extra row and using xyouts but it got ugly and it
won't give me a title that spans all columns.

TIA

Mathew
