Hello,

I started some days ago with idl, found very quickly a program in the library, but i need to adapt this a little bit.

slide_image.pro

I need the Position of the scrollbars, or the upper_left, lower_right Coordinates of the scroll_image.

I found the "WIDGET_EVENT with a TYPE :3" means Viewport Moved, but the Region of the Viewport is not returned

And i want to position the scollbars from an event, i.e. horizontal_start, vertical_start.

Thanks for some help

Uli
