I'll try something like that

```
aux=""
OPENR, un$lun, file, /GET_LUN

WHILE ~EOF(un$lun) DO BEGIN

  READF, un$lun, aux

  aux_str=STRSPLIT(aux, ' ', /EXTRACT)

  PRINT, 'label', aux_str[0:1]
  PRINT, 'values', aux_str[2:*]

  ;; Then you can concatenate, etc...

ENDWHILE

FREE_LUN, un$lun
```
