Subject: Write DTD to XML File

Hi All,

I'm using the IDL XML objects for reading and writing XML parameter files for my applications. However, I can't see how to write a DTD to my XML file. If I read in an XML file, with a DTD, using the LOAD method for the IDLffXMLDOMDocument class, and then write it back out using the SAVE method of the same class, the DTD is preserved. Also if I delete the DocumentType Node, and then write out the file, the DTD is no longer written. So the DTD is stored within DocumentType node. However, none of the methods to the IDLffXMLDOMDocumentType seem to give me access to the DTD. Anyone dealt with this before?

I actually use the SAX parser for reading my XML, and I believe it would give me access to the DTD (via the startDTD/endDTD methods), but this still doesn't allow me to write the DTD to the XML file.

Thanks,

Stephen
