Hi David,

Thank you for your reply.

ref_band and maskgrid both have dimensions of [600, 1000, 7]. My bad I didn't mention earlier.

I found that IMAGE_STATISTICS works for 3D as well; I changed by code like;

```
ref_band = fltarr(s_size,l_size,7)
ref_band(*,*,band_no-1) = reflective_bands(nw_sam:nw_sam +
roi_sam_size-1 , nw_lin:nw_lin + roi_len_size-1, band_no)
```

where, nw_sam and nw_lin are pixel position of northwest corner of my ROI.

```
roi_sam_size = 600
roi_len_size = 1000
```

Anyway, I am happy to come-over this problem.

Ashok
