I'm working with IDL image manipulation. Could anyone tell me how can I perform warping or image fitting?

I have 2 images, the 2nd have sufer a translaction. I mark 6 points on the 2 images. How can I transform (warping or fitting) the 2nd image to the right position (6 points of the 1st image equals to the 6 points of the 2nd image) to perform an image subtraction?

Email me if you could.

fred@imagem.ibili.uc.pt

Thanx.

Fred
