Hi,

Here's an easy one. I have an array[5], y:

```
IDL> print, y  
data = 1 2 3
```

and I'd like to make IDL print:

```
data = [1, 2, 3]
```

When I try:

```
IDL> m = n_elements(y)  
IDL> print, y[0:1], '[', y[2:m-2]+'', y[m-1] + '']
```

IDL prints:

```
fabio =  
[  
1, 2,  
3]
```

How can I get this result in just one line (instead of 4)?

Thanks in advance,
Fabio
