Subject: Reading Arrow keys from keyboard? Posted by lindaas on Wed, 02 Dec 1992 16:10:25 GMT

We would like to use the arrow keys from our vt240 keyboard (at least I think it is a vt240). In IDL we can use GET\_KBRD() to get ASCII keys but have not figured out how to determine if an arrow key was hit.

for example

IDL>a=get\_kbrd(1)

IDL>[D

->this is what happens if we hit the left-arrow key (its code is ESC-[D I beleive).

If someone knows how to do this please respond via e-mail to zhang@bnlx1l.nsls.bnl.gov (or bnlx1l::zhang)

Thanks!

(ps it should also apply to function keys as well?)
