Hi, everybody!

As a part of my Ph.D research I need to use technique called Canonical Correlation Analysis. From the references and books I read about, it seems to be an old and good technique for data analysis. Before "inventing my own wheel", I would like to ask : Is there any library/routine which performs CCA? It doesn't matter if it's for IDL, C or Fortran.

I tried to seach WWW pages for IDL and found nothing.

I will greatly appreciate any hints/code/URLS/etc...
